

## Cognosante's Health Information Clearinghouse: Driving Innovation with Purpose in Healthcare

At Cognosante, we believe that every individual deserves access to comprehensive, personalized healthcare. That's why we've developed a state-of-the-art Health Information Clearinghouse, a secure and centralized repository of clinical data that allows healthcare providers and patients, public health agencies, payers and managed care organizations, to easily and securely share curated critical health information.

Our Health Information Clearinghouse is fed by Cognosante's hosted Health Information Exchange, which supports interoperability between healthcare providers, facilities, healthcare entities, public health registries, HIOs, and national-level health information networks. Leveraging IHE query and retrieve, Clinical Data Provide and Register, Intra / Interstate Master Patient Identity Management, Patient Privacy Monitoring, and ADT Forwarding services, our Health Information Exchange provides a reliable, secure, and scalable platform for health information exchange.

The Health Information Clearinghouse provides syndicated data delivery services of specific pre-identified patient cohorts of curated clinical data to authorized interested subscribers and public health registries. This helps healthcare providers and public health officials gain a better understanding of population health, identify areas of improvement, and make informed decisions about patient care.

With the Health Information Clearinghouse, providers are engaged in their patients' care like never before. They can view clinical data on their roster of patients and receive clinical alerts and notifications related to event triggers associated with their patients. This allows them to quickly identify issues, take action, and provide better care.

Patients are also empowered with the Health Information Clearinghouse. They can see their complete clinical history from a patient portal or the eSante MyHealth App, monitor who has viewed or seen their patient records, and take control of their health journey.

In addition, the data within the Health Information Clearinghouse can be enriched with SDOH (Social Determinants of Health) factors from publicly available data sources. This provides valuable information about the social factors that may be influencing a patient's health or ability to recover from a disease, illness, or injury, allowing healthcare providers to develop more effective care plans.

Finally, the Health Information Clearinghouse is an invaluable resource for predictive analytics. By leveraging enriched data, healthcare providers can gain valuable insights into population health, identify at-risk patients, and drive care delivery and transformation. This helps ensure that each patient receives the best possible care, tailored to their unique needs and circumstances.

## In Conclusion

Cognosante's Health Information Clearinghouse is driving innovation with purpose in healthcare by providing a secure and centralized repository of clinical data that empowers both providers and patients. With our state-of-the-art technology, predictive analytics, and SDOH enrichment, we're helping healthcare providers make informed decisions, deliver better care, and improve population health.
